

earthshaking like Ramanujan's mathematical insights were - and it feels somewhat important. People don't take much conscious notice of this instinctual experience, she says - due to the left-brain's dictatorial linear insistence on having names, categories, and plenary verbal descriptions for anything which is to be consciously contemplated.

Studies now show that a significant percentage of modern populations are overly-verbalized people who do confuse meaning per-se with fallow tranches of verbal description, and who have trouble conceptualizing fuzzy, inexplicable, or nameless
